

# Delivering a knowledge-rich lesson

- Plan a clear sequence of instruction and practice that consolidates and builds students' knowledge throughout the lesson
- Break content knowledge into bite-size pieces and plan mini-activities for students to practice that content
- Prepare materials in advance (chart paper, knowledge organiser, etc)
- Interleave previously learned content into questions about new content
- After teaching content, ask "thinking questions" that depend on the knowledge you just taught
- Get students to work together and challenge one another in order to practice new content.
